

RST CULTURE BOOK

NICE TO MEET YOU

RST SOFTWARE
MASTERS

For more than 20 years, our common work, passions, and challenges have made us who we are today. On top of creating software, we also create our own history. We were influenced by the rapidly developing IT industry, years of experience, and people of RST Software Masters who create an amazing atmosphere every day.

Have a peek inside RST. See our values, history, and the things that influence our daily cooperation with others. We created this book, so you could get to know us better.

Our values

To us values are more than just words written on walls. They have derived from our experiences, history, and things we considered key to maintain an atmosphere of a development-friendly place, where extraordinary projects are made.

We respect, listen, and learn from one another and we are open to feedback. We are passionate about challenging projects, and we strive to create complementarity of engineering and heart.

Effectiveness, quality, respect and honesty are a compass of our actions, including business ones. It's a path that we want to walk together.

EFFECTIVENESS

agility, efficiency, mastery, utility

We work responsibly, meet deadlines, respect our and others' time, draw conclusions from our job, and choose the best solutions available.

RESPECT

openness, tolerance, equality, diplomacy

We are all equal. Everyone is entitled to their own beliefs, everyone's voice is equally important, and we respect knowledge, opinions, and experience of others.

QUALITY

predictability, reliance, stability

We create predictable and stable products, and we build bespoke solutions that fit our customers' individual needs. We are watchful and involved in every step of product development.

HONESTY

bravery, integrity, openness, assertiveness

We are open about our needs, we talk about our successes as well as difficulties that we face in our everyday life, and we draw constructive conclusions.

Our history

Over 20 years of RST history have been presented on 3 pages in the form of dates, events and places.

Everything started with Szymon Podgórski's bravery and idea. Back then, he was an eighteen-year-old entrepreneur wearing a red jacket. His enthusiasm and persistence have brought us to where we are today. It probably wouldn't be possible without a bit of luck and people he met along the way.

See how it all started...

Eighteen-year-old Szymon starts his first business. He began with an internet cafe in Świdnica and building websites in his garage.

Establishment of Rising Sun Technologies

First attempts in the development of IT platforms that supported various industries. NetTur was a convenient solution for tour operators. It stood out from the competitive solutions as it had an IM module.

NetTur

A second and completely revised approach to the original idea. This time it was built on a light network infrastructure and based on an IM module.

Instant messaging software and a carrier exchange for TSL industry

1998

2000

2003

1999

2001

Release of the FireZone game

The final step of a project Szymon and his small team started few years ago. They created a modern, at that time, game that was released in a boxed version. The game received good reviews and to this day is sought after by collectors.

Cefte freight exchange

A shared vision with business partners led to the first attempt to create a so-called freight exchange. The goal was to develop a complete app for the logistics and forwarding industry.

2009 - Scrum implementation

A natural step for the company development was the opening of a new office in Wrocław. The big city provided a better access to IT specialists and new business possibilities.

Office in Wrocław

The functionalities of the freight exchange were extended with tools for forwarders, logisticians, and drivers. A complete TSL ecosystem was created under the name Trans.eu System.

Development of Trans.eu System

In the next stage of development, a group of technology companies was created. RST-IT software house (today known as Software Brothers) and RST Lift Off startup accelerator joined RST.

RST Group is founded

2004

2012

2014

2005

2013

Founding Logintrans

Existing partners divided their roles – RST would develop software, and Logintrans would handle its promotion and sales.

Our first startup

Drawing from the experience in developing systems connecting users, a new convenient tool was created for small hotels and guesthouses called BedBooking.

2010 - 50 employees

2014 - 100 employees

2015 - Agility Path

2017 - implementation of SAFe

Development of a new Trans.eu platform started. Modern architecture and process automation allowed for an even better response to the needs of the transport industry.

A fund with the goal to implement investments contributing to cleaner Earth and the environment was established. Money is invested in projects that contribute to the improvement of living and working conditions.

We improve our competences to meet the requirements of the market and new technologies.

RST Meethub

We created an extraordinary space encouraging people to build mutual relationships. Here, we eat breakfast, plan strategic meetings, and organise workshops and lectures for the IT industry.

Change of strategy

We expanded to new markets, clients and projects both domestically and outside Poland.

2017 - 150 employees

2020 - to be continued

Business and us

A Polish software house with over 20 years of experience? Yes, it's possible!

The ability to build highly scalable systems was gained over years of cooperation with our clients. We want to know the exact business needs to deliver bespoke technological solutions. For us, each project is a new history that we want to write with you.

Good relations and people are crucial for effective cooperation. We employ more than 150 regular and senior developers, 9 tech leaders, and 7 architects. Our experts are our strength and advantage on the market, therefore we focus on a continuous education and development of both hard and soft skills. In our work we use agile methodologies such as Scrum, Kanban, or SAFe (Scaled Agile Framework).

By investing in startups and establishing our own Venture Capital fund, we gained a new perspective as an investor and a product owner.

At the end of the day we are one team. Together with our clients we aim to achieve our goals.

Our organisational culture

To us, interpersonal relations are more important than the size of the company. Due to the organic growth, we are able to preserve the values and culture of the company.

Krzysztof Habowski

CEO of RST Software Masters

1. No matter if you have worked with us for a day or 10 years, you are equally important. We respect and listen to one another.
2. Our values of effectiveness, quality, respect and honesty are the pillars of effective work and communication.
3. Self-organisation – people have a real impact on their work and the direction of company development.
4. No dress code – we wear according to our style and mood – we respect individualities.

5. No open spaces – our teams work in rooms designed according to their own style.
6. We support our employees in their self-development and getting out of their comfort zones. We allow ourselves to reach for what's new and unknown. We find it essential to deepen our knowledge of both hard and soft skills.
7. We focus on the atmosphere and relations we build with our employees and clients. Communication is key to cooperation.
8. Integration is not only about an unforgettable retreat and great fun – we take this opportunity to do something good for others. It's a time when we can meet people in unusual circumstances and give something back.
9. Meethub – the heart of RST. It is the place where we eat breakfast in the morning, and where we share knowledge and host various workshops in the afternoon. The most heated discussions take place by coffee machines!
10. CEO = Krzysiek. You can meet our CEO in both offices. His door is always open, and he's constantly running down the hallways with a cup of tea with lemon.

Volunteering is a part of our code

To us social responsibility in business is something more than just building a positive image of a company. We believe that achieving business objectives, paying attention to one's surroundings, and undertaking non-profit activities at the same time is possible.

We act locally and always remember about our roots. That's why we created our patronage class in ZSB-E in Świdnica. Our original curriculum was the key to provide practical training to prepare student to become developers. We want to have an impact on the society and share our experience. We inspire changes, even in our personal lives. We support promotion of sport and healthy lifestyle, therefore for years we have been a title sponsor of the RST Półmaraton Świdnicki (RST half marathon in Świdnica) where you can meet some of our employees.

We take part in events such as: Nakrętki dla Hospicjum (Bottlecaps for hospice), Pomoc Mierzona Kilometrami (Help Measured in Kilometers) or blood donations for the Polish Red Cross. Each year, during integration retreats we take up social activities where over 100 RST employees, in their free time, help people in need. We restored an old stable in Lubań, built bee hives for charges of MONAR, renovated orphanages in Jelenia Góra, and supported Fundacja Na Ratunek Dzieciom z Chorobą Nowotworową (Saving Kids with Cancer Foundation).

We constantly look for opportunities to help those most in need. We talk, educate and show that together we can do more.

Development

We support our employees every day. To do that, we equip them with necessary tools and help them remove barriers hindering their personal development. Trainings, conferences and workshops are just a few of many options they have. We constantly look for possibilities to introduce improvements, and to learn new technologies and innovations.

Development of our employees gives them a chance to take up new challenges, projects, or a new position in a team. For our company it's extremely important to have an opportunity to learn and surround ourselves with experts. Exchange of knowledge, the ability to grow, and the atmosphere are key factors that contribute to the satisfaction of our employees.

Thinking about hosting IT events and lectures, initiating industry events, or writing articles for a blog? Or maybe you have an idea for your own startup? We invest in innovative projects that combine software and hardware, which support environmental care and better living conditions.

HR Guide

Right from the beginning of their career, RST employees can rely on support and cooperation from one of our HR Guides. Our HR team – House of HR – is a strong crew that always stays close to people. They inspire and support us during undergoing changes, and if a problem arises, they help to solve it.

The tasks of a HR Guide include new employee onboarding, getting them to know our company, and laying out development opportunities. Furthermore, they are responsible for conducting performance reviews, satisfaction surveys and salary negotiations. You can always pay them a visit and talk. :)

House of HR supports the need of our employees, the organisation, and the business. This way they build partnership based on honesty, respect, trust and feedback culture.

Make yourself at home

We spend the majority of our life at work. Yes, it's true! Therefore, it's important with whom, where and how we work. We pay attention to our organisational culture, the way it is formed, what affects it and how it evolves over the years. We strive to maintain a good atmosphere and best relations with our clients.

Each of us has different habits and paths we follow every day. We can brag about our employees, their passions, hobbies and incredible abilities for hours. Our team includes climbers, musicians, cyclists, lazybones, sailors, dog lovers, basketball players, travellers, people who like to draw and many other personalities.

On the next page you can see a typical ;) day of one of our employees – Krzysztof Bąk, QA & RM Leader.
